Safe, Gentle, Non-corrosive, and Non-Staining

Emergicide™ HC is a broad spectrum germicidal cleaner, disinfectant and deodorizer originally created for the harshest of disease control places like animal hospitals, yet perfect for use in hospitals, assisted living, schools grocery, restaurants, resorts, transportation, golf courses, athletics, businesses and in the home. The concentrated formula knocks out pathogens in one easy labor-saving step. This very popular quaternary disinfectant is EPA registered and kills a broad spectrum of pathogens. Effective against viruses (**including COVID-19**), bacteria, and fungi.

Emergicide™ HC retains its efficacy even in hard water. Emergicide's pH remains neutral at a dilution of 2 oz per gallon of water, providing for the highest level of safety for staff, customers and students with no rinsing necessary. It has a contact time of 10 minutes.

Once it is dry, it is completely safe. An abundant level of detergent and odor control makes it an extraordinary cleaner while its wintergreen fragrance leaves behind a "fresh and clean" scent.

How to use:

1. Dilution of 2 oz. per gallon of water (**even for COVID-19**)
2. Spray on non-porous surfaces. It has a contact time of 10 minutes.
3. Once it is dry there is no need to rinse. It is completely safe.
